

Question 1: Why do we need Classes in JavaScript?

Ans: To create reusable blueprints/templates for objects.

Question 2: How to create a Class in JavaScript?

Ans: Using the `class` keyword.

Question 3: How to invoke a Class constructor?

Ans: Using the `new` keyword.

Question 4: How to set Methods in a Class?

Ans: By defining them directly inside the class (no `function` keyword needed).

Question 5: How to set Properties in a Class?

Ans: By defining them inside the `constructor` using `this`.
